## DARKWEB CRAWLER PROJECT

`darc` is designed as a swiss army knife for darkweb crawling. It integrates `requests` to collect HTTP request and response information, such as cookies, header fields, etc. It also bundles `selenium` to provide a fully rendered web page and screenshot of such view.

### 1.1 URL Utilities

The `Link` class is the key data structure of the `darc` project, it contains all information required to identify a URL's proxy type, hostname, path prefix when saving, etc.

The `link` module also provides several wrapper function to the `urllib.parse`.

**class** `darc.link.Link(url, proxy, url_parse, host, base, name)`  
Bases: `object`

Parsed link.

#### Parameters

- `url` – original link
- `proxy` – proxy type
- `host` – URL's hostname
- `base` – base folder for saving files
- `name` – hashed link for saving files
- `url_parse` – parsed URL from `urllib.parse.urlparse()`

**Returns** Parsed link object.

**Return type** `Link`

---

**Note:** `Link` is a dataclass object. It is safely *hashable*, through `hash(url)`.

---

#### `__hash__()`

Provide hash support to the `Link` object.

**base:** `str`

base folder for saving files

**host:** `str`

URL's hostname

```
name: str
    hashed link for saving files

proxy: str
    proxy type

url: str
    original link

url_parse: urllib.parse.ParseResult
    parsed URL from urllib.parse.urlparse()

darc.link.parse_link(link, host=None)
Parse link.
```

#### Parameters

- **link** (`str`) – link to be parsed
- **host** (*Optional*[`str`]) – hostname of the link

**Returns** The parsed link object.

**Return type** `darc.link.Link`

---

**Note:** If host is provided, it will override the hostname of the original link.

---

The parsing process of proxy type is as follows:

0. If host is None and the parse result from `urllib.parse.urlparse()` has no netloc (or hostname) specified, then set hostname as (null); else set it as is.
1. If the scheme is data, then the link is a data URI, set hostname as data and proxy as data.
2. If the scheme is javascript, then the link is some JavaScript codes, set proxy as script.
3. If the scheme is bitcoin, then the link is a Bitcoin address, set proxy as bitcoin.
4. If the scheme is ed2k, then the link is an ED2K magnet link, set proxy as ed2k.
5. If the scheme is magnet, then the link is a magnet link, set proxy as magnet.
6. If the scheme is mailto, then the link is an email address, set proxy as mail.
7. If the scheme is irc, then the link is an IRC link, set proxy as irc.
8. If the scheme is NOT any of http or https, then set proxy to the scheme.
9. If the host is None, set hostname to (null), set proxy to null.
10. If the host is an onion (.onion) address, set proxy to tor.
11. If the host is an I2P (.i2p) address, or any of localhost:7657 and localhost:7658, set proxy to i2p.
12. If the host is *localhost* on `ZERONET_PORT`, and the path is not /, i.e. **NOT** root path, set proxy to zeronet; and set the first part of its path as hostname.

Example:

For a ZeroNet address, e.g. `http://127.0.0.1:43110/1HeLlo4uzjaLetFx6NH3PMwFP3qbRbTf3D`, `parse_link()` will parse the hostname as `1HeLlo4uzjaLetFx6NH3PMwFP3qbRbTf3D`.

13. If the host is *localhost* on *FREENET\_PORT*, and the path is not /, i.e. **NOT** root path, set proxy to freenet; and set the first part of its path as hostname.

Example:

For a Freenet address, e.g. http://127.0.0.1:8888/USK@nwa8lHa271k2QvJ8aa0Ov7IHAV-DFOCFgmDt3X6BpCI,DuQSUZiI~agF8c-6tjsFFGuZ8eICrzWCILB60nT8KKo, AQACAAE/sone/77/, `parse_link()` will parse the hostname as USK@nwa8lHa271k2QvJ8aa0Ov7IHAV-DFOCFgmDt3X6BpCI, DuQSUZiI~agF8c-6tjsFFGuZ8eICrzWCILB60nT8KKo, AQACAAE.

14. If none of the cases above satisfied, the proxy will be set as null, marking it a plain normal link.

The base for parsed link `Link` object is defined as

```
<root>/<proxy>/<scheme>/<hostname>/
```

where `root` is `PATH_DB`.

The name for parsed link `Link` object is the sha256 hash (c.f. `hashlib.sha256()`) of the original link.

`darc.link.quote(string, safe='/', encoding=None, errors=None)`

Wrapper function for `urllib.parse.quote()`.

#### Parameters

- **string** (`AnyStr`) – string to be quoted
- **safe** (`AnyStr`) – characters not to escape
- **encoding** (`Optional[str]`) – string encoding
- **errors** (`Optional[str]`) – encoding error handler

**Returns** The quoted string.

**Return type** `str`

---

**Note:** The function suppressed possible errors when calling `urllib.parse.quote()`. If any, it will return the original string.

`darc.link.unquote(string, encoding='utf-8', errors='replace')`

Wrapper function for `urllib.parse.unquote()`.

#### Parameters

- **string** (`AnyStr`) – string to be unquoted
- **encoding** (`str`) – string encoding
- **errors** (`str`) – encoding error handler

**Returns** The quoted string.

**Return type** `str`

---

**Note:** The function suppressed possible errors when calling `urllib.parse.unquote()`. If any, it will return the original string.

`darc.link.urljoin(base, url, allow_fragments=True)`

Wrapper function for `urllib.parse.urljoin()`.

### Parameters

- **base** (*AnyStr*) – base URL
- **url** (*AnyStr*) – URL to be joined
- **allow\_fragments** (*bool*) – if allow fragments

**Returns** The joined URL.

**Return type** `str`

---

**Note:** The function suppressed possible errors when calling `urllib.parse.urljoin()`. If any, it will return `base/url` directly.

---

`darc.link.urlparse(url, scheme='', allow_fragments=True)`

Wrapper function for `urllib.parse.urlparse()`.

### Parameters

- **url** (*str*) – URL to be parsed
- **scheme** (*str*) – URL scheme
- **allow\_fragments** (*bool*) – if allow fragments

**Returns** The parse result.

**Return type** `urllib.parse.ParseResult`

---

**Note:** The function suppressed possible errors when calling `urllib.parse.urlparse()`. If any, it will return `urllib.parse.ParseResult(scheme=scheme, netloc='', path=url, params='', query='', fragment='')` directly.

---

## 1.2 Source Parsing

The `darc.parse` module provides auxiliary functions to read `robots.txt`, sitemaps and HTML documents. It also contains utility functions to check if the proxy type, hostname and content type if in any of the black and white lists.

`darc.parse._check(temp_list)`

Check hostname and proxy type of links.

**Parameters** `temp_list` (*List[darc.link.Link]*) – List of links to be checked.

**Returns** List of links matches the requirements.

**Return type** `List[darc.link.Link]`

---

**Note:** If `CHECK_NG` is `True`, the function will directly call `_check_ng()` instead.

---

**See also:**

- `darc.parse.match_host()`
- `darc.parse.match_proxy()`

**darc.parse.\_check\_ng**(*temp\_list*)

Check content type of links through HEAD requests.

**Parameters** **temp\_list** (*List[darc.link.Link]*) – List of links to be checked.

**Returns** List of links matches the requirements.

**Return type** *List[darc.link.Link]*

**See also:**

- *darc.parse.match\_host()*
- *darc.parse.match\_proxy()*
- *darc.parse.match\_mime()*

**darc.parse.check\_robots**(*link*)

Check if link is allowed in robots.txt.

**Parameters** **link** (*darc.link.Link*) – The link object to be checked.

**Returns** If link is allowed in robots.txt.

**Return type** *bool*

---

**Note:** The root path of a URL will always return True.

---

**darc.parse.extract\_links**(*link, html, check=False*)

Extract links from HTML document.

**Parameters**

- **link** (*darc.link.Link*) – Original link of the HTML document.
- **html** (*Union[str, bytes]*) – Content of the HTML document.
- **check** (*bool*) – If perform checks on extracted links, default to *CHECK*.

**Returns** List of extracted links.

**Return type** *List[darc.link.Link]*

**See also:**

- *darc.parse.\_check()*
- *darc.parse.\_check\_ng()*

**darc.parse.get\_content\_type**(*response*)

Get content type from response.

**Parameters** **response** (*requests.Response*) – Response object.

**Returns** The content type from response.

**Return type** *str*

---

**Note:** If the Content-Type header is not defined in *response*, the function will utilise *magic* to detect its content type.

---

`darc.parse.match_host(host)`

Check if hostname in black list.

**Parameters** `host (str)` – Hostname to be checked.

**Returns** If host in black list.

**Return type** `bool`

---

**Note:** If host is None, then it will always return True.

---

**See also:**

- `darc.const.LINK_WHITE_LIST`
- `darc.const.LINK_BLACK_LIST`
- `darc.const.LINK_FALLBACK`

`darc.parse.match_mime(mime)`

Check if content type in black list.

**Parameters** `mime (str)` – Content type to be checked.

**Returns** If mime in black list.

**Return type** `bool`

**See also:**

- `darc.const.MIME_WHITE_LIST`
- `darc.const.MIME_BLACK_LIST`
- `darc.const.MIME_FALLBACK`

`darc.parse.match_proxy(proxy)`

Check if proxy type in black list.

**Parameters** `proxy (str)` – Proxy type to be checked.

**Returns** If proxy in black list.

**Return type** `bool`

---

**Note:** If proxy is script, then it will always return True.

---

**See also:**

- `darc.const.PROXY_WHITE_LIST`
- `darc.const.PROXY_BLACK_LIST`
- `darc.const.PROXY_FALLBACK`

`darc.save._SAVE_LOCK: multiprocessing.Lock`

I/O lock for saving link hash database link.csv.

**See also:**

- darc.save.save\_link()

## 1.3 Link Database

The `darc` project utilises file system based database to provide tele-process communication.

---

**Note:** In its first implementation, the `darc` project used `multiprocessing.Queue` to support such communication. However, as noticed when runtime, the `multiprocessing.Queue` object will be much affected by the lack of memory.

---

There will be two databases, both locate at root of the data storage path `PATH_DB`:

- the `requests` database – `queue_requests.txt`
- the `selenium` database – `queue.selenium.txt`

At runtime, after reading such database, `darc` will keep a backup of the database with `.tmp` suffix to its file extension.

`darc.db.drop_hostname(link)`

Remove link from the hostname database.

**Parameters** `link(darc.link.Link)` – Link to be removed.

`darc.db.drop_requests(link)`

Remove link from the `requests` database.

**Parameters** `link(darc.link.Link)` – Link to be removed.

`darc.db.drop.selenium(link)`

Remove link from the `selenium` database.

**Parameters** `link(darc.link.Link)` – Link to be removed.

`darc.db.get_lock(name, timeout=None, sleep=0.1, blocking_timeout=None, lock_class=None, thread_local=True)`

Get a lock for Redis operations.

**Parameters**

- `name(str)` – Lock name.
- `timeout(Optional[float])` – Maximum life for the lock.
- `sleep(float)` – Amount of time to sleep per loop iteration when the lock is in blocking mode and another client is currently holding the lock.
- `blocking_timeout(Optional[float])` – Maximum amount of time in seconds to spend trying to acquire the lock.
- `lock_class(Optional[redis.lock.Lock])` – Lock implementation.
- `thread_local(bool)` – Whether the lock token is placed in thread-local storage.

**Returns** Return a new `redis.lock.Lock` object using key name that mimics the behavior of `threading.Lock`.

**Return type** Union[`redis.lock.Lock`, `contextlib.nullcontext`]

---

## Notes

If REDIS\_LOCK is `False`, returns a `contextlib.nullcontext` instead.

---

`darc.db.have_hostname(link)`

Check if current link is a new host.

**Parameters** `link(darc.link.Link)` – Link to check against.

**Returns** If such link is a new host.

**Return type** `bool`

`darc.db.load_requests(check=False)`

Load link from the `requests` database.

**Parameters** `check(bool)` – If perform checks on loaded links, default to `CHECK`.

**Returns** List of loaded links from the `requests` database.

**Return type** `List[darc.link.Link]`

---

**Note:** At runtime, the function will load links with maximum number at `MAX_POOL` to limit the memory usage.

---

`darc.db.load_selenium(check=False)`

Load link from the `selenium` database.

**Parameters** `check(bool)` – If perform checks on loaded links, default to `CHECK`.

**Returns** List of loaded links from the `selenium` database.

**Return type** `List[darc.link.Link]`

---

**Note:** At runtime, the function will load links with maximum number at `MAX_POOL` to limit the memory usage.

---

`darc.db.redis_command(command, *args, **kwargs)`

Wrapper function for Redis command.

**Parameters**

- `command(str)` – Command name.
- `*args` – Arbitrary arguments for the Redis command.

**Keyword Arguments** `**kwargs` – Arbitrary keyword arguments for the Redis command.

**Returns** Values returned from the Redis command.

**Return type** Any

`darc.db.save_requests(entries, single=False, score=None, nx=False, xx=False)`

Save link to the `requests` database.

**Parameters**

- `entries(List[darc.link.Link])` – Links to be added to the `requests` database.  
It can be either a `list` of links, or a single link string (if `single` set as `True`).
- `single(bool)` – Indicate if `entries` is a `list` of links or a single link string.

- **score** – Score to for the Redis sorted set.
- **nx** – Forces ZADD to only create new elements and not to update scores for elements that already exist.
- **xx** – Forces ZADD to only update scores of elements that already exist. New elements will not be added.

`darc.db.save_selenium(entries, single=False, score=None, nx=False, xx=False)`

Save link to the `selenium` database.

#### Parameters

- **entries** (`List [darc.link.Link]`) – Links to be added to the `selenium` database. It can be either an *iterable* of links, or a single link string (if `single` set as True).
- **single** (`bool`) – Indicate if `entries` is an *iterable* of links or a single link string.
- **score** – Score to for the Redis sorted set.
- **nx** – Forces ZADD to only create new elements and not to update scores for elements that already exist.
- **xx** – Forces ZADD to only update scores of elements that already exist. New elements will not be added.

`darc.db.QR_LOCK: multiprocessing.Lock`

I/O lock for the `requests` database `_queue_requests.txt`.

#### See also:

- `darc.db.save_requests()`

`darc.db.QS_LOCK: Union[multiprocessing.Lock, threading.Lock, contextlib.nullcontext]`

I/O lock for the `selenium` database `_queue.selenium.txt`.

If `FLAG_MP` is True, it will be an instance of `multiprocessing.Lock`. If `FLAG_TH` is True, it will be an instance of `threading.Lock`. If none above, it will be an instance of `contextlib.nullcontext`.

#### See also:

- `darc.db.save_selenium()`
- `darc.const.FLAG_MP`
- `darc.const.FLAG_TH`

`darc.db.MAX_POOL: int`

**Default** 1\_000

**Environ** `DARC_MAX_POOL`

Maximum number of links loading from the database.

**Note:** If is an infinit `inf`, no limit will be applied.

`darc.submit.PATH_API = '{PATH_DB}/api/'`

Path to the API submittion records, i.e. `api` folder under the root of data storage.

#### See also:

- *darc.const.PATH\_DB*

**darc.submit.API\_RETRY: int**

Retry times for API submission when failure.

**Default** 3

**Environ** *API\_RETRY*

**darc.submit.API\_NEW\_HOST: str**

API URL for submit\_new\_host().

**Default** None

**Environ** *API\_NEW\_HOST*

**darc.submit.API\_REQUESTS: str**

API URL for submit\_requests().

**Default** None

**Environ** *API\_REQUESTS*

**darc.submit.API\_SELENIUM: str**

API URL for submit\_selenium().

**Default** None

**Environ** *API\_SELENIUM*

---

**Note:** If *API\_NEW\_HOST*, *API\_REQUESTS* and *API\_SELENIUM* is None, the corresponding submit function will save the JSON data in the path specified by *PATH\_API*.

---

**See also:**

The *darc* provides a demo on how to implement a *darc*-compliant web backend for the data submission module. See the *demo* page for more information.

## 1.4 Proxy Utilities

The *darc.proxy* module provides various proxy support to the *darc* project.

**darc.proxy.bitcoin.PATH = '{PATH\_MISC}/bitcoin.txt'**

Path to the data storage of bitcoin addresses.

**See also:**

- *darc.const.PATH\_MISC*

**darc.proxy.bitcoin.LOCK: multiprocessing.Lock**

I/O lock for saving bitcoin addresses *PATH*.

**darc.proxy.data.PATH = '{PATH\_MISC}/data/'**

Path to the data storage of data URI schemes.

**See also:**

- *darc.const.PATH\_MISC*

---

`darc.proxy.ed2k.PATH = '{PATH_MISC}/ed2k.txt'`  
Path to the data storage of bED2K magnet links.

**See also:**

- `darc.const.PATH_MISC`

`darc.proxy.ed2k.LOCK: multiprocessing.Lock`  
I/O lock for saving ED2K magnet links `PATH`.

The following constants are configuration through environment variables:

`darc.proxy.freenet.FREENET_PORT: int`  
Port for Freenet proxy connection.

**Default** 8888

**Environ** `FREENET_PORT`

`darc.proxy.freenet.FREENET_RETRY: int`  
Retry times for Freenet bootstrap when failure.

**Default** 3

**Environ** `FREENET_RETRY`

`darc.proxy.freenet.BS_WAIT: float`  
Time after which the attempt to start Freenet is aborted.

**Default** 90

**Environ** `FREENET_WAIT`

---

**Note:** If not provided, there will be **NO** timeouts.

---

`darc.proxy.freenet.FREENET_PATH: str`  
Path to the Freenet project.

**Default** /usr/local/src/freenet

**Environ** `FREENET_PATH`

`darc.proxy.freenet.FREENET_ARGS: List[str]`  
Freenet bootstrap arguments for run.sh start.

If provided, it should be parsed as command line arguments (c.f. `shlex.split`).

**Default** ''

**Environ** `FREENET_ARGS`

---

**Note:** The command will be run as `DARC_USER`, if current user (c.f. `getpass.getuser()`) is `root`.

The following constants are defined for internal usage:

`darc.proxy.freenet._FREENET_BS_FLAG: bool`  
If the Freenet proxy is bootstrapped.

`darc.proxy.freenet._FREENET_PROC: subprocess.Popen`  
Freenet proxy process running in the background.

`darc.proxy.freenet._FREENET_ARGS: List[str]`  
Freenet proxy bootstrap arguments.

### 1.4.1 I2P Proxy

The `darc.proxy.i2p` module contains the auxiliary functions around managing and processing the I2P proxy.

`darc.proxy.i2p._i2p_bootstrap()`  
I2P bootstrap.

The bootstrap arguments are defined as `_I2P_ARGS`.

**Raises** `subprocess.CalledProcessError` – If the return code of `_I2P_PROC` is non-zero.

**See also:**

- `darc.proxy.i2p.i2p_bootstrap()`
- `darc.proxy.i2p.BS_WAIT`
- `darc.proxy.i2p._I2P_BS_FLAG`
- `darc.proxy.i2p._I2P_PROC`

`darc.proxy.i2p.fetch_hosts(link)`  
Fetch hosts.txt.

**Parameters** `link(darc.link.Link)` – Link object to fetch for its hosts.txt.

**Returns** Content of the hosts.txt file.

`darc.proxy.i2p.get_hosts(link)`  
Read hosts.txt.

**Parameters** `link(darc.link.Link)` – Link object to read hosts.txt.

**Returns**

- If hosts.txt exists, return the data from hosts.txt.
  - path – relative path from hosts.txt to root of data storage `PATH_DB`, `<proxy>/<scheme>/<hostname>/hosts.txt`
  - data – `base64` encoded content of hosts.txt
- If not, return None.

**Return type** `Optional[Dict[str, Union[str, ByteString]]]`

**See also:**

- `darc.submit.submit_new_host()`
- `darc.proxy.i2p.save_hosts()`

`darc.proxy.i2p.have_hosts(link)`  
Check if hosts.txt already exists.

**Parameters** `link(darc.link.Link)` – Link object to check if hosts.txt already exists.

**Returns**

- If hosts.txt exists, return the path to hosts.txt, i.e. `<root>/<proxy>/<scheme>/<hostname>/hosts.txt`.

- If not, return None.

**Return type** Optional[str]

darc.proxy.i2p.**i2p\_bootstrap()**

Bootstrap wrapper for I2P.

The function will bootstrap the I2P proxy. It will retry for *I2P\_RETRY* times in case of failure.

Also, it will **NOT** re-bootstrap the proxy as is guaranteed by *\_I2P\_BS\_FLAG*.

**Warns** **I2PBootstrapFailed** – If failed to bootstrap I2P proxy.

**Raises** **UnsupportedPlatform** – If the system is not supported, i.e. not macOS or Linux.

**See also:**

- *darc.proxy.i2p.\_i2p\_bootstrap()*
- *darc.proxy.i2p.I2P\_RETRY*
- *darc.proxy.i2p.\_I2P\_BS\_FLAG*

darc.proxy.i2p.**read\_hosts**(*text*, *check=False*)

Read hosts.txt.

**Parameters**

- **text** (str) – Content of hosts.txt.
- **check** (bool) – If perform checks on extracted links, default to *CHECK*.

**Returns** List of links extracted.

**Return type** List[*darc.link.Link*]

darc.proxy.i2p.**save\_hosts**(*link*, *text*)

Save hosts.txt.

**Parameters**

- **link** (*darc.link.Link*) – Link object of hosts.txt.
- **text** (str) – Content of hosts.txt.

**Returns** Saved path to hosts.txt, i.e. <root>/<proxy>/<scheme>/<hostname>/hosts.txt.

**Return type** str

**See also:**

- *darc.save.sanitise()*

darc.proxy.i2p.**I2P\_REQUESTS\_PROXY**: Dict[str, Any]

Proxy for I2P sessions.

**See also:**

- *darc.requests.i2p\_session()*

darc.proxy.i2p.**I2P\_SELENIUM\_PROXY**: selenium.webdriver.Proxy

Proxy (*selenium.webdriver.Proxy*) for I2P web drivers.

**See also:**

- `darc.selenium.i2p_driver()`

The following constants are configuration through environment variables:

`darc.proxy.i2p.I2P_PORT: int`

Port for I2P proxy connection.

**Default** 4444

**Environ** `I2P_PORT`

`darc.proxy.i2p.I2P_RETRY: int`

Retry times for I2P bootstrap when failure.

**Default** 3

**Environ** `I2P_RETRY`

`darc.proxy.i2p.BS_WAIT: float`

Time after which the attempt to start I2P is aborted.

**Default** 90

**Environ** `I2P_WAIT`

---

**Note:** If not provided, there will be **NO** timeouts.

---

`darc.proxy.i2p.I2P_ARGS: List[str]`

I2P bootstrap arguments for i2prouter start.

If provided, it should be parsed as command line arguments (c.f. `shlex.split`).

**Default** ''

**Environ** `I2P_ARGS`

---

**Note:** The command will be run as `DARC_USER`, if current user (c.f. `getpass.getuser()`) is `root`.

---

The following constants are defined for internal usage:

`darc.proxy.i2p._I2P_BS_FLAG: bool`

If the I2P proxy is bootstrapped.

`darc.proxy.i2p._I2P_PROC: subprocess.Popen`

I2P proxy process running in the background.

`darc.proxy.i2p._I2P_ARGS: List[str]`

I2P proxy bootstrap arguments.

`darc.proxy.irc.PATH = '{PATH_MISC}/irc.txt'`

Path to the data storage of IRC addresses.

**See also:**

- `darc.const.PATH_MISC`

`darc.proxy.irc.LOCK: multiprocessing.Lock`

I/O lock for saving IRC addresses `PATH`.

darc.proxy.magnet.**PATH** = '{**PATH\_MISC**}/magnet.txt'

Path to the data storage of magnet links.

See also:

- *darc.const.PATH\_MISC*

darc.proxy.magnet.**LOCK**: `multiprocessing.Lock`

I/O lock for saving magnet links *PATH*.

darc.proxy.mail.**PATH** = '{**PATH\_MISC**}/mail.txt'

Path to the data storage of email addresses.

See also:

- *darc.const.PATH\_MISC*

darc.proxy.mail.**LOCK**: `multiprocessing.Lock`

I/O lock for saving email addresses *PATH*.

darc.proxy.null.**PATH** = '{**PATH\_MISC**}/invalid.txt'

Path to the data storage of links with invalid scheme.

See also:

- *darc.const.PATH\_MISC*

darc.proxy.null.**LOCK**: `multiprocessing.Lock`

I/O lock for saving links with invalid scheme *PATH*.

darc.proxy.tor.**TOR\_REQUESTS\_PROXY**: `Dict[str, Any]`

Proxy for Tor sessions.

See also:

- *darc.requests.tor\_session()*

darc.proxy.tor.**TOR\_SELENIUM\_PROXY**: `selenium.webdriver.Proxy`

Proxy (*selenium.webdriver.Proxy*) for Tor web drivers.

See also:

- *darc.selenium.tor\_driver()*

The following constants are configuration through environment variables:

darc.proxy.tor.**TOR\_PORT**: `int`

Port for Tor proxy connection.

**Default** 9050

**Environ** *TOR\_PORT*

darc.proxy.tor.**TOR\_CTRL**: `int`

Port for Tor controller connection.

**Default** 9051

**Environ** *TOR\_CTRL*

`darc.proxy.tor.TOR_STEM: bool`

If manage the Tor proxy through `stem`.

**Default** True

**Environ** `TOR_STEM`

`darc.proxy.tor.TOR_PASS: str`

Tor controller authentication token.

**Default** None

**Environ** `TOR_PASS`

---

**Note:** If not provided, it will be requested at runtime.

---

`darc.proxy.tor.TOR_RETRY: int`

Retry times for Tor bootstrap when failure.

**Default** 3

**Environ** `TOR_RETRY`

`darc.proxy.tor.BS_WAIT: float`

Time after which the attempt to start Tor is aborted.

**Default** 90

**Environ** `TOR_WAIT`

---

**Note:** If not provided, there will be **NO** timeouts.

---

`darc.proxy.tor.TOR_CFG: Dict[str, Any]`

Tor bootstrap configuration for `stem.process.launch_tor_with_config()`.

**Default** {}

**Environ** `TOR_CFG`

---

**Note:** If provided, it will be parsed from a JSON encoded string.

---

The following constants are defined for internal usage:

`darc.proxy.tor._TOR_BS_FLAG: bool`

If the Tor proxy is bootstrapped.

`darc.proxy.tor._TOR_PROC: subprocess.Popen`

Tor proxy process running in the background.

`darc.proxy.tor._TOR_CTRL: stem.control.Controller`

Tor controller process (`stem.control.Controller`) running in the background.

`darc.proxy.tor._TOR_CONFIG: List[str]`

Tor bootstrap configuration for `stem.process.launch_tor_with_config()`.

The following constants are configuration through environment variables:

`darc.proxy.zeronet.ZERONET_PORT: int`

Port for ZeroNet proxy connection.

**Default** 43110**Environ** `ZERONET_PORT``darc.proxy.zeronet.ZERONET_RETRY: int`

Retry times for ZeroNet bootstrap when failure.

**Default** 3**Environ** `ZERONET_RETRY``darc.proxy.zeronet.BS_WAIT: float`

Time after which the attempt to start ZeroNet is aborted.

**Default** 90**Environ** `ZERONET_WAIT`**Note:** If not provided, there will be **NO** timeouts.`darc.proxy.zeronet.ZERONET_PATH: str`

Path to the ZeroNet project.

**Default** /usr/local/src/zeronet**Environ** `ZERONET_PATH``darc.proxy.zeronet.ZERONET_ARGS: List[str]`

ZeroNet bootstrap arguments for run.sh start.

If provided, it should be parsed as command line arguments (c.f. `shlex.split`).**Default** ''**Environ** `ZERONET_ARGS`**Note:** The command will be run as `DARC_USER`, if current user (c.f. `getpass.getuser()`) is `root`.

The following constants are defined for internal usage:

`darc.proxy.zeronet._ZERONET_BS_FLAG: bool`

If the ZeroNet proxy is bootstrapped.

`darc.proxy.zeronet._ZERONET_PROC: subprocess.Popen`

ZeroNet proxy process running in the background.

`darc.proxy.zeronet._ZERONET_ARGS: List[str]`

ZeroNet proxy bootstrap arguments.

To tell the `darc` project which proxy settings to be used for the `requests.Session` objects and `selenium.webdriver.Chrome` objects, you can specify such information in the `darc.proxy.LINK_MAP` mapping dictionary.`darc.proxy.LINK_MAP: DefaultDict[str, Tuple[types.FunctionType, types.FunctionType]]`

```
LINK_MAP = collections.defaultdict(
    lambda: (darc.requests.null_session, darc.selenium.null_driver),
    dict(
        tor=(darc.requests.tor_session, darc.selenium.tor_driver),
        i2p=(darc.requests.i2p_session, darc.selenium.i2p_driver),
```

(continues on next page)

(continued from previous page)

```
)  
)
```

The mapping dictionary for proxy type to its corresponding `requests.Session` factory function and `selenium.webdriver.Chrome` factory function.

The fallback value is the no proxy `requests.Session` object (`null_session()`) and `selenium.webdriver.Chrome` object (`null_driver()`).

**See also:**

- `darc.requests` – `requests.Session` factory functions
- `darc.selenium` – `selenium.webdriver.Chrome` factory functions

## 1.5 Sites Customisation

As websites may have authentication requirements, etc., over its content, the `darc.sites` module provides sites customisation hooks to both `[requests!]` and `[selenium!]` crawling processes.

```
# -*- coding: utf-8 -*-
"""Default Hooks
=====

The :mod:`darc.sites.default` module is the fallback for sites
customisation.

"""

import time

import darc.typing as typing
from darc.const import SE_WAIT
from darc.link import Link

def crawler(session: typing.Session, link: Link) -> typing.Response:
    """Default crawler hook.

    Args:
        session (/Session/_): Session object with proxy settings.
        link: Link object to be crawled.

    Returns:
        /Response/_: The final response object with crawled data.

    See Also:
        * :func:`darc.crawl.crawler`

    """

    response = session.get(link.url, allow_redirects=True)
    return response

def loader(driver: typing.Driver, link: Link) -> typing.Driver:
```

(continues on next page)

(continued from previous page)

```

"""Default loader hook.

When loading, if :data:`~darc.const.SE_WAIT` is a valid time lapse,
the function will sleep for such time to wait for the page to finish
loading contents.

Args:
    driver (/Chrome/_): Web driver object with proxy settings.
    link: Link object to be loaded.

Returns:
    /Chrome/_: The web driver object with loaded data.

Note:
    Internally, /selenium/_ will wait for the browser to finish
    loading the pages before return (i.e. the web API event
    /event/_). However, some extra scripts may take more time
    running after the event.

    .. /event/ replace:: ``DOMContentLoaded``
    .. _event: https://developer.mozilla.org/en-US/docs/Web/API/Window/
    ↪DOMContentLoaded_event

See Also:
    * :func:`darc.crawl.loader`
    * :data:`darc.const.SE_WAIT`

"""

driver.get(link.url)

# wait for page to finish loading
if SE_WAIT is not None:
    time.sleep(SE_WAIT)

return driver

```

To customise behaviours over **requests**, you sites customisation module should have a `crawler()` function, e.g. `crawler()`.

The function takes the **Session** object with proxy settings and a `Link` object representing the link to be crawled, then returns a **Response** object containing the final data of the crawling process.

To customise behaviours over **selenium**, you sites customisation module should have a `loader()` function, e.g. `loader()`.

The function takes the **Chrome** object with proxy settings and a `Link` object representing the link to be loaded, then returns the **Chrome** object containing the final data of the loading process.

## 1.6 Module Constants

### 1.6.1 Auxiliary Function

### 1.6.2 General Configurations

darc.const.REBOOT: bool

If exit the program after first round, i.e. crawled all links from the `requests` link database and loaded all links from the `selenium` link database.

This can be useful especially when the capacity is limited and you wish to save some space before continuing next round. See [Docker integration](#) for more information.

**Default** False

**Environ** `DARC_REBOOT`

darc.const.DEBUG: bool

If run the program in debugging mode.

**Default** False

**Environ** `DARC_DEBUG`

darc.const.VERBOSE: bool

If run the program in verbose mode. If `DEBUG` is True, then the verbose mode will be always enabled.

**Default** False

**Environ** `DARC_VERBOSE`

darc.const.FORCE: bool

If ignore robots.txt rules when crawling (c.f. `crawler()`).

**Default** False

**Environ** `DARC_FORCE`

darc.const.CHECK: bool

If check proxy and hostname before crawling (when calling `extract_links()`, `read_sitemap()` and `read_hosts()`).

If `CHECK_NG` is True, then this environment variable will be always set as True.

**Default** False

**Environ** `DARC_CHECK`

darc.const.CHECK\_NG: bool

If check content type through HEAD requests before crawling (when calling `extract_links()`, `read_sitemap()` and `read_hosts()`).

**Default** False

**Environ** `DARC_CHECK_CONTENT_TYPE`

darc.const.ROOT: str

The root folder of the project.

darc.const.CWD = '..'

The current working direcory.

darc.const.DARC\_CPU: int

Number of concurrent processes. If not provided, then the number of system CPUs will be used.

**Default** None

**Environ** `DARC_CPU`

`darc.const.FLAG_MP: bool`

If enable *multiprocessing* support.

**Default** True

**Environ** `DARC_MULTIPROCESSING`

`darc.const.FLAG_TH: bool`

If enable *multithreading* support.

**Default** False

**Environ** `DARC_MULTITHREADING`

**Note:** `FLAG_MP` and `FLAG_TH` can NOT be toggled at the same time.

`darc.const.DARC_USER: str`

*Non-root* user for proxies.

**Default** current login user (c.f. `getpass.getuser()`)

**Environ** `DARC_USER`

### 1.6.3 Data Storage

`darc.const.REDIS: redis.Redis`

URL to the Redis database.

**Default** `redis://127.0.0.1`

**Environ** `REDIS_URL`

`darc.const.PATH_DB: str`

Path to data storage.

**Default** `data`

**Environ** `PATH_DATA`

**See also:**

See `darc.save` for more information about source saving.

`darc.const.PATH_MISC = '{PATH_DB}/misc/'`

Path to miscellaneous data storage, i.e. misc folder under the root of data storage.

**See also:**

- `darc.const.PATH_DB`

`darc.const.PATH_LN = '{PATH_DB}/link.csv'`

Path to the link CSV file, `link.csv`.

**See also:**

- `darc.const.PATH_DB`
- `darc.save.save_link`

`darc.const.PATH_QR = '{PATH_DB}/_queue_requests.txt'`

Path to the `requests` database, `_queue_requests.txt`.

**See also:**

- `darc.const.PATH_DB`
- `darc.db.load_requests()`
- `darc.db.save_requests()`

`darc.const.PATH_QS = '{PATH_DB}/_queue.selenium.txt'`

Path to the `selenium` database, `_queue.selenium.txt`.

**See also:**

- `darc.const.PATH_DB`
- `darc.db.load.selenium()`
- `darc.db.save.selenium()`

`darc.const.PATH_ID = '{PATH_DB}/darc.pid'`

Path to the process ID file, `darc.pid`.

**See also:**

- `darc.const.PATH_DB`
- `darc.const.getpid()`

## 1.6.4 Web Crawlers

`darc.const.DARC_WAIT: Optional[float]`

Time interval between each round when the `requests` and/or `selenium` database are empty.

**Default** 60

**Environ** `DARC_WAIT`

`darc.const.SAVE: bool`

If save processed link back to database.

---

**Note:** If `SAVE` is True, then `SAVE_REQUESTS` and `SAVE_SELENIUM` will be forced to be True.

---

**Default** False

**Environ** `DARC_SAVE`

**See also:**

See `darc.db` for more information about link database.

`darc.const.SAVE_REQUESTS: bool`

If save crawler() crawled link back to `requests` database.

**Default** False

**Environ** `DARC_SAVE_REQUESTS`

**See also:**

See `darc.db` for more information about link database.

`darc.const.SAVE_SELENIUM: bool`

If save loader() crawled link back to `selenium` database.

**Default** False

**Environ** `DARC_SAVE_SELENIUM`

**See also:**

See `darc.db` for more information about link database.

`darc.const.TIME_CACHE: float`

Time delta for caches in seconds.

The `darc` project supports *caching* for fetched files. `TIME_CACHE` will specify for how long the fetched files will be cached and **NOT** fetched again.

---

**Note:** If `TIME_CACHE` is None then caching will be marked as *forever*.

---

**Default** 60

**Environ** `TIME_CACHE`

`darc.const.SE_WAIT: float`

Time to wait for `selenium` to finish loading pages.

---

**Note:** Internally, `selenium` will wait for the browser to finish loading the pages before return (i.e. the web API event `DOMContentLoaded`). However, some extra scripts may take more time running after the event.

---

**Default** 60

**Environ** `SE_WAIT`

`darc.const.SE_EMPTY = '<html><head></head><body></body></html>'`

The empty page from `selenium`.

**See also:**

- `darc.crawl.loader()`

## 1.6.5 White / Black Lists

`darc.const.LINK_WHITE_LIST: List[re.Pattern]`

White list of hostnames should be crawled.

**Default** []

**Environ** `LINK_WHITE_LIST`

---

**Note:** Regular expressions are supported.

---

darc.const.**LINK\_BLACK\_LIST**: List[re.Pattern]

Black list of hostnames should be crawled.

**Default** []

**Environ** *LINK\_BLACK\_LIST*

---

**Note:** Regular expressions are supported.

---

darc.const.**LINK\_FALLBACK**: bool

Fallback value for *match\_host()*.

**Default** False

**Environ** *LINK\_FALLBACK*

darc.const.**MIME\_WHITE\_LIST**: List[re.Pattern]

White list of content types should be crawled.

**Default** []

**Environ** *MIME\_WHITE\_LIST*

---

**Note:** Regular expressions are supported.

---

darc.const.**MIME\_BLACK\_LIST**: List[re.Pattern]

Black list of content types should be crawled.

**Default** []

**Environ** *MIME\_BLACK\_LIST*

---

**Note:** Regular expressions are supported.

---

darc.const.**MIME\_FALLBACK**: bool

Fallback value for *match\_mime()*.

**Default** False

**Environ** *MIME\_FALLBACK*

darc.const.**PROXY\_WHITE\_LIST**: List[str]

White list of proxy types should be crawled.

**Default** []

**Environ** *PROXY\_WHITE\_LIST*

---

**Note:** The proxy types are **case insensitive**.

---

darc.const.**PROXY\_BLACK\_LIST**: List[str]

Black list of proxy types should be crawled.

**Default** []

**Environ** *PROXY\_BLACK\_LIST*

---

**Note:** The proxy types are **case insensitive**.

---

`darc.const.PROXY_FALLBACK: bool`  
Fallback value for `match_proxy()`.

**Default** False

**Environ** `PROXY_FALLBACK`

## 1.7 Custom Exceptions

The `render_error()` function can be used to render multi-line error messages with `stem.util.term` colours.

The `darc` project provides following custom exceptions:

- `LinkNoReturn`
- `UnsupportedLink`
- `UnsupportedPlatform`
- `UnsupportedProxy`

The `darc` project provides following custom exceptions:

- `TorBootstrapFailed`
- `I2PBootstrapFailed`
- `ZeroNetBootstrapFailed`
- `FreenetBootstrapFailed`
- `APIRequestFailed`
- `SiteNotFoundWarning`
- `LockWarning`
- `TorRenewFailed`
- `RedisCommandFailed`

**exception** `darc.error.APIRequestFailed`

Bases: `Warning`

API submit failed.

**exception** `darc.error.FreenetBootstrapFailed`

Bases: `Warning`

Freenet bootstrap process failed.

**exception** `darc.error.I2PBootstrapFailed`

Bases: `Warning`

I2P bootstrap process failed.

**exception** `darc.error.LinkNoReturn`

Bases: `Exception`

The link has no return value from the hooks.

```
exception darc.error.LockWarning
```

Bases: Warning

Failed to acquire Redis lock.

```
exception darc.error.RedisCommandFailed
```

Bases: Warning

Redis command execution failed.

```
exception darc.error.SiteNotFoundWarning
```

Bases: ImportWarning

Site customisation not found.

```
exception darc.error.TorBootstrapFailed
```

Bases: Warning

Tor bootstrap process failed.

```
exception darc.error.TorRenewFailed
```

Bases: Warning

Tor renew request failed.

```
exception darc.error.UnsupportedLink
```

Bases: Exception

The link is not supported.

```
exception darc.error.UnsupportedPlatform
```

Bases: Exception

The platform is not supported.

```
exception darc.error.UnsupportedProxy
```

Bases: Exception

The proxy is not supported.

```
exception darc.error.ZeroNetBootstrapFailed
```

Bases: Warning

ZeroNet bootstrap process failed.

```
darc.error.render_error(message, colour)
```

Render error message.

The function wraps the `stem.util.term.format()` function to provide multi-line formatting support.

#### Parameters

- **message** (`str`) – Multi-line message to be rendered with `colour`.
- **colour** (`stem.util.term.Color`) – Front colour of text, c.f. `stem.util.term.Color`.

**Returns** The rendered error message.

**Return type** `str`

As the websites can be sometimes irritating for their anti-robots verification, login requirements, etc., the `darc` project also provides hooks to customise crawling behaviours around both `requests` and `selenium`.

**See also:**

Such customisation, as called in the `darc` project, site hooks, is site specific, user can set up your own hooks unto a certain site, c.f. `darc.sites` for more information.

Still, since the network is a world full of mysteries and miracles, the speed of crawling will much depend on the response speed of the target website. To boost up, as well as meet the system capacity, the `darc` project introduced multiprocessing, multithreading and the fallback slowest single-threaded solutions when crawling.

---

**Note:** When rendering the target website using `selenium` powered by the renown Google Chrome, it will require much memory to run. Thus, the three solutions mentioned above would only toggle the behaviour around the use of `selenium`.

---

To keep the `darc` project as it is a swiss army knife, only the main entrypoint function `darc.process`.  
`process()` is exported in global namespace (and renamed to `darc.darc()`), see below:

---

CHAPTER  
TWO

---

## WEB BACKEND DEMO

This is a demo of API for communication between the `darc` crawlers (`darc.submit`) and web UI.

Assuming the web UI is developed using the `Flask` microframework.

```
# -*- coding: utf-8 -*-

import flask # pylint: disable=import-error

# Flask application
app = flask.Flask(__file__)

@app.route('/api/new_host', methods=['POST'])
def new_host():
    """When a new host is discovered, the :mod:`darc` crawler will submit the
    host information. Such includes ``robots.txt`` (if exists) and
    ``sitemap.xml`` (if any).

    Data format::

        {
            // metadata of URL
            "[metadata)": {
                // original URL - <scheme>://<netloc>/<path>;<params>?<query>#
            ↪<fragment>
                "url": ...,
                // proxy type - null / tor / i2p / zeronet / freenet
                "proxy": ...,
                // hostname / netloc, c.f. ``urllib.parse.urlparse``
                "host": ...,
                // base folder, relative path (to data root path ``PATH_DATA``) in
            ↪containter - <proxy>/<scheme>/<host>
                "base": ...,
                // sha256 of URL as name for saved files (timestamp is in ISO format)
                // JSON log as this one - <base>/<name>_<timestamp>.json
                // HTML from requests - <base>/<name>_<timestamp>_raw.html
                // HTML from selenium - <base>/<name>_<timestamp>.html
                // generic data files - <base>/<name>_<timestamp>.dat
                "name": ...
            },
            // requested timestamp in ISO format as in name of saved file
            "Timestamp": ...,
            // original URL
            "URL": ...
        }
    
```

(continues on next page)

(continued from previous page)

```

// robots.txt from the host (if not exists, then ``null``)
"Robots": {

# JSON data from the request
data = flask.request.json # pylint: disable=unused-variable

# do whatever processing needed
...

@app.route('/api/selenium', methods=['POST'])
def from_selenium():
    """After crawling with ``requests``, we'll then render the URL using
    ``selenium`` with Google Chrome and its driver, to provide a fully rendered
    web page. Such information will be submitted to the web UI.

    Note:
        This information is optional, only provided if the content type from
        ``requests`` is HTML, status code < 400, and HTML data not empty.

    Data format::

    {
        // metadata of URL
        "[metadata)": {
            // original URL - <scheme>://<netloc>/<path>;<params>?<query>#
        ↪<fragment>
            "url": ...,
            // proxy type - null / tor / i2p / zeronet / freenet
            "proxy": ...,
            // hostname / netloc, c.f. ``urllib.parse.urlparse``
            "host": ...,
            // base folder, relative path (to data root path ``PATH_DATA``) in_
        ↪containter - <proxy>/<scheme>/<host>
            "base": ...,
            // sha256 of URL as name for saved files (timestamp is in ISO format)
            // JSON log as this one - <base>/<name>_<timestamp>.json
            // HTML from requests - <base>/<name>_<timestamp>_raw.html
            // HTML from selenium - <base>/<name>_<timestamp>.html
            // generic data files - <base>/<name>_<timestamp>.dat
            "name": ...
        },
        // requested timestamp in ISO format as in name of saved file
        "Timestamp": ...,
        // original URL
        "URL": ...,
        // rendered HTML document (if not exists, then ``null``)
        "Document": {
            // path of the file, relative path (to data root path ``PATH_DATA``)_in container
            // - <proxy>/<scheme>/<host>/<name>_<timestamp>.html
            "path": ...,
            // content of the file (**base64** encoded)
            "data": ...
        },
        // web page screenshot (if not exists, then ``null``)
        "Screenshot": {
            // path of the file, relative path (to data root path ``PATH_DATA``)_in container
            // - <proxy>/<scheme>/<host>/<name>_<timestamp>.png
        }
    }
}

```

# do whatever processing needed
...

if __name__ == "__main__":
    flask.run()
```

## DOCKER INTEGRATION

The `darc` project is integrated with Docker and Compose. Though published to [Docker Hub](#), you can still build by yourself.

---

**Important:** The debug image contains miscellaneous documents, i.e. whole repository in it; and pre-installed some useful tools for debugging, such as IPython, etc.

---

The Docker image is based on [Ubuntu Bionic](#) (18.04 LTS), setting up all Python dependencies for the `darc` project, installing [Google Chrome](#) (version 79.0.3945.36) and corresponding [ChromeDriver](#), as well as installing and configuring [Tor](#), [I2P](#), [ZeroNet](#), [FreeNet](#), [NoIP](#) proxies.

---

**Note:** NoIP is currently not fully integrated in the `darc` due to misunderstanding in the configuration process. Contributions are welcome.

---

When building the image, there is an *optional* argument for setting up a *non-root* user, c.f. environment variable `DARC_USER` and module constant `DARC_USER`. By default, the username is `darc`.

```

**Note:**

- retry is a shell script for retrying the commands until success

```
#!/usr/bin/env bash

while true; do
    >&2 echo "+ $@"
    $@ && break
    >&2 echo "exit: $?"
done
>&2 echo "exit: 0"
```

- pty-install is a Python script simulating user input for APT package installation with DEBIAN\_FRONTEND set as Teletype.

```
#!/usr/bin/env python3
# -*- coding: utf-8 -*-
"""Install packages requiring interactions."""

import argparse
import os
import subprocess
import sys
import tempfile

def get_parser():
    """Argument parser."""
    parser = argparse.ArgumentParser('install',
                                    description='pseudo-interactive package installer')
    parser.add_argument('-i', '--stdin', help='content for input')
    parser.add_argument('command', nargs=argparse.REMAINDER, help='command to execute')

    return parser

def main():
    """Entrypoint."""
    parser = get_parser()
    args = parser.parse_args()
    text = args.stdin.encode().decode('unicode_escape')
```

(continues on next page)

(continued from previous page)

```

path = tempfile.mktemp(prefix='install-')
with open(path, 'w') as file:
    file.write(text)

with open(path, 'r') as file:
    proc = subprocess.run(args.command, stdin=file)  # pylint: disable=subprocess-run-check

os.remove(path)
return proc.returncode

if __name__ == "__main__":
    sys.exit(main())

```

As always, you can also use Docker Compose to manage the `darc` image. Environment variables can be set as described in the [configuration](#) section.

restart: "always"
networks: *networks
volumes: *volumes

```

(continues on next page)

(continued from previous page)

```
redis:
  image: redis:darc
  build:
    context: .
    dockerfile: extra/redis.dockerfile
  container_name: redis
  expose:
    - 6379
  restart: "always"
  networks: *networks
  volumes:
    - /data/darc/redis:/data

# network settings
networks:
  darc:
    driver: bridge
```

**Note:** Should you wish to run *darc* in reboot mode, i.e. set *DARC\_REBOOT* and/or *REBOOT* as True, you may wish to change the entrypoint to

```
bash /app/run.sh
```

where *run.sh* is a shell script wraps around *darc* especially for reboot mode.

```
#!/usr/bin/env bash

set -e

# time lapse
WAIT=${DARC_WAIT=10}

# signal handlers
trap '[ -f ${PATH_DATA}/darc.pid ] && kill -2 $(cat ${PATH_DATA}/darc.pid)' SIGINT
↪SIGTERM SIGKILL

# initialise
echo "+ Starting application..."
python3 -m darc $@
sleep ${WAIT}

# mainloop
while true; do
  echo "+ Restarting application..."
  python3 -m darc
  sleep ${WAIT}
done
```

In such scenario, you can customise your *run.sh* to, for instance, archive then upload current data crawled by *darc* to somewhere else and save up some disk space.

Or you may wish to look into the *\_queue\_requests.txt* and *\_queue\_selenium.txt* databases (c.f. *darc.db*), and make some minor adjustments to, perhaps, narrow down the crawling targets.

## AUXILIARY SCRIPTS

Since the `darc` project can be deployed through *Docker Integration*, we provided some auxiliary scripts to help with the deployment.

### 4.1 Health Check

**File location** `extra/healthcheck.py`

```
usage: healthcheck [-h] [-f FILE] [-i INTERVAL]

health check running container

optional arguments:
-h, --help            show this help message and exit
-f FILE, --file FILE  path to compose file
-i INTERVAL, --interval INTERVAL
                      interval (in seconds) of health check
```

This script will watch the running status of containers managed by Docker Compose. If the containers are stopped or of *unhealthy* status, it will bring the containers back alive.

Also, as the internal program may halt unexpectedly whilst the container remains *healthy*, the script will watch if the program is still active through its output messages. If inactive, the script will restart the containers.

### 4.2 Upload API Submission Files

**File location**

- Entry point: `extra/upload.py`
- Helper script: `extra/upload.sh`

```
usage: upload [-h] [-f FILE] [-p PATH] [-i INTERVAL] -H HOST [-U USER]

upload API submission files

optional arguments:
-h, --help            show this help message and exit
-f FILE, --file FILE  path to compose file
-p PATH, --path PATH  path to data storage
-i INTERVAL, --interval INTERVAL
```

(continues on next page)

(continued from previous page)

|   |
|---|
| interval (in seconds) to upload               |
| -H HOST, --host HOST upstream hostname        |
| -U USER, --user USER upstream user credential |

This script will automatically upload API submission files, c.f. `darc.submit`, using `curl(1)`. The `--user` option is supplied for the same option of `curl(1)`.

When uploading, the script will *pause* the running containers and it will *unpause* them upon completion.

## 4.3 Remove Repeated Lines

**File location** `extra/uniq.py`

This script works the same as `uniq(1)`, except it filters one input line at a time without putting pressure onto memory utilisation.

`darc` is designed as a swiss army knife for darkweb crawling. It integrates `requests` to collect HTTP request and response information, such as cookies, header fields, etc. It also bundles `selenium` to provide a fully rendered web page and screenshot of such view.

The general process of `darc` can be described as following:

0. `process()`: obtain URLs from the `requests` link database (c.f. `load_requests()`), and feed such URLs to `crawler()` with *multiprocessing* support.
1. `crawler()`: parse the URL using `parse_link()`, and check if need to crawl the URL (c.f. `PROXY_WHITE_LIST`, `PROXY_BLACK_LIST`, `LINK_WHITE_LIST` and `LINK_BLACK_LIST`); if true, then crawl the URL with `requests`.

If the URL is from a brand new host, `darc` will first try to fetch and save `robots.txt` and sitemaps of the host (c.f. `save_robots()` and `save_sitemap()`), and extract then save the links from sitemaps (c.f. `read_sitemap()`) into link database for future crawling (c.f. `save_requests()`). Also, if the submission API is provided, `submit_new_host()` will be called and submit the documents just fetched.

If `robots.txt` presented, and `FORCE` is `False`, `darc` will check if allowed to crawl the URL.

---

**Note:** The root path (e.g. / in <https://www.example.com/>) will always be crawled ignoring `robots.txt`.

---

At this point, `darc` will call the customised hook function from `darc.sites` to crawl and get the final response object. `darc` will save the session cookies and header information, using `save_headers()`.

---

**Note:** If `requests.exceptions.InvalidSchema` is raised, the link will be saved by `save_invalid()`. Further processing is dropped.

---

If the content type of response document is not ignored (c.f. `MIME_WHITE_LIST` and `MIME_BLACK_LIST`), `darc` will save the document using `save_html()` or `save_file()` accordingly. And if the submission API is provided, `submit_requests()` will be called and submit the document just fetched.

If the response document is HTML (`text/html` and `application/xhtml+xml`), `extract_links()` will be called then to extract all possible links from the HTML document and save such links into the database (c.f. `save_requests()`).

And if the response status code is between 400 and 600, the URL will be saved back to the link database (c.f. `save_requests()`). If NOT, the URL will be saved into `selenium` link database to proceed next steps (c.f. `save_selenium()`).

2. `process()`: in the meanwhile, `darc` will obtain URLs from the `selenium` link database (c.f. `load_selenium()`), and feed such URLs to `loader()`.

---

**Note:** If `FLAG_MP` is True, the function will be called with *multiprocessing* support; if `FLAG_TH` if True, the function will be called with *multithreading* support; if none, the function will be called in single-threading.

---

3. `loader()`: parse the URL using `parse_link()` and start loading the URL using `selenium` with Google Chrome.

At this point, `darc` will call the customised hook function from `darc.sites` to load and return the original `selenium.webdriver.Chrome` object.

If successful, the rendered source HTML document will be saved using `save_html()`, and a full-page screenshot will be taken and saved.

If the submission API is provided, `submit_selenium()` will be called and submit the document just loaded.

Later, `extract_links()` will be called then to extract all possible links from the HTML document and save such links into the `requests` database (c.f. `save_requests()`).

---

CHAPTER  
**FIVE**

---

## INSTALLATION

---

**Note:** `darc` supports Python all versions above and includes **3.6**. Currently, it only supports and is tested on Linux (*Ubuntu 18.04*) and macOS (*Catalina*).

When installing in Python versions below **3.8**, `darc` will use `walrus` to compile itself for backport compatibility.

---

```
pip install darc
```

Please make sure you have Google Chrome and corresponding version of Chrome Driver installed on your system.

---

**Important:** Starting from version **0.3.0**, we introduced `Redis` for the task queue database backend. Please make sure you have it installed, configured, and running when using the `darc` project.

---

However, the `darc` project is shipped with Docker and Compose support. Please see *Docker Integration* for more information.

Or, you may refer to and/or install from the [Docker Hub repository](#):

```
docker pull jsnbzh/darc[:TAGNAME]
```

---

CHAPTER  
SIX

---

## USAGE

The *darc* project provides a simple CLI:

```
usage: darc [-h] [-f FILE] ...

the darkweb crawling swiss army knife

positional arguments:
  link           links to craw

optional arguments:
  -h, --help      show this help message and exit
  -f FILE, --file FILE  read links from file
```

It can also be called through module entrypoint:

```
python -m python-darc ...
```

---

**Note:** The link files can contain **comment** lines, which should start with `#`. Empty lines and comment lines will be ignored when loading.

---

## CONFIGURATION

Though simple CLI, the `darc` project is more configurable by environment variables.

### 7.1 General Configurations

#### DARC\_REBOOT

**Type** `bool(int)`

**Default** 0

If exit the program after first round, i.e. crawled all links from the `requests` link database and loaded all links from the `selenium` link database.

This can be useful especially when the capacity is limited and you wish to save some space before continuing next round. See [Docker integration](#) for more information.

#### DARC\_DEBUG

**Type** `bool(int)`

**Default** 0

If run the program in debugging mode.

#### DARC\_VERBOSE

**Type** `bool(int)`

**Default** 0

If run the program in verbose mode. If DARC\_DEBUG is True, then the verbose mode will be always enabled.

#### DARC\_FORCE

**Type** `bool(int)`

**Default** 0

If ignore `robots.txt` rules when crawling (c.f. `crawler()`).

#### DARC\_CHECK

**Type** `bool(int)`

**Default** 0

If check proxy and hostname before crawling (when calling `extract_links()`, `read_sitemap()` and `read_hosts()`).

If DARC\_CHECK\_CONTENT\_TYPE is True, then this environment variable will be always set as True.

#### DARC\_CHECK\_CONTENT\_TYPE

**Type** bool(int)

**Default** 0

If check content type through HEAD requests before crawling (when calling `extract_links()`, `read_sitemap()` and `read_hosts()`).

#### DARC\_CPU

**Type** int

**Default** None

Number of concurrent processes. If not provided, then the number of system CPUs will be used.

#### DARC\_MULTIPROCESSING

**Type** bool(int)

**Default** 1

If enable *multiprocessing* support.

#### DARC\_MULTITHREADING

**Type** bool(int)

**Default** 0

If enable *multithreading* support.

---

**Note:** DARC\_MULTIPROCESSING and DARC\_MULTITHREADING can **NOT** be toggled at the same time.

---

#### DARC\_USER

**Type** str

**Default** current login user (c.f. `getpass.getuser()`)

*Non-root* user for proxies.

#### DARC\_MAX\_POOL

**Type** int

**Default** 1\_000

Maximum number of links loaded from the database.

---

**Note:** If is an infinit `inf`, no limit will be applied.

---

**See also:**

- `darc.db.load_requests()`
- `darc.db.load_selenium()`

## 7.2 Data Storage

### **REDIS\_URL**

**Type** str(url)

**Default** redis://127.0.0.1

URL to the Redis database.

### **PATH\_DATA**

**Type** str(path)

**Default** data

Path to data storage.

#### **See also:**

See `darc.save` for more information about source saving.

## 7.3 Web Crawlers

### **DARC\_WAIT**

**Type** float

**Default** 60

Time interval between each round when the `requests` and/or `selenium` database are empty.

### **DARC\_SAVE**

**Type** bool(int)

**Default** 0

If save processed link back to database.

**Note:** If `DARC_SAVE` is True, then `DARC_SAVE_REQUESTS` and `DARC_SAVE_SELENIUM` will be forced to be True.

#### **See also:**

See `darc.db` for more information about link database.

### **DARC\_SAVE\_REQUESTS**

**Type** bool(int)

**Default** 0

If save crawler() crawled link back to `requests` database.

#### **See also:**

See `darc.db` for more information about link database.

### **DARC\_SAVE\_SELENIUM**

**Type** bool(int)

**Default** 0

If save loader () crawled link back to `selenium` database.

**See also:**

See `darc.db` for more information about link database.

**TIME\_CACHE**

**Type** float

**Default** 60

Time delta for caches in seconds.

The `darc` project supports *caching* for fetched files. `TIME_CACHE` will specify for how long the fetched files will be cached and **NOT** fetched again.

---

**Note:** If `TIME_CACHE` is `None` then caching will be marked as *forever*.

---

**SE\_WAIT**

**Type** float

**Default** 60

Time to wait for `selenium` to finish loading pages.

---

**Note:** Internally, `selenium` will wait for the browser to finish loading the pages before return (i.e. the web API event `DOMContentLoaded`). However, some extra scripts may take more time running after the event.

---

## 7.4 White / Black Lists

**LINK\_WHITE\_LIST**

**Type** List[str] (JSON)

**Default** []

White list of hostnames should be crawled.

---

**Note:** Regular expressions are supported.

---

**LINK\_BLACK\_LIST**

**Type** List[str] (JSON)

**Default** []

Black list of hostnames should be crawled.

---

**Note:** Regular expressions are supported.

---

**LINK\_FALLBACK**

**Type** bool(int)

**Default** 0

---

Fallback value for `match_host()`.

**MIME\_WHITE\_LIST**

**Type** List[str] (JSON)

**Default** []

White list of content types should be crawled.

---

**Note:** Regular expressions are supported.

---

**MIME\_BLACK\_LIST**

**Type** List[str] (JSON)

**Default** []

Black list of content types should be crawled.

---

**Note:** Regular expressions are supported.

---

**MIME\_FALLBACK**

**Type** bool(int)

**Default** 0

Fallback value for `match_mime()`.

**PROXY\_WHITE\_LIST**

**Type** List[str] (JSON)

**Default** []

White list of proxy types should be crawled.

---

**Note:** The proxy types are **case insensitive**.

---

**PROXY\_BLACK\_LIST**

**Type** List[str] (JSON)

**Default** []

Black list of proxy types should be crawled.

---

**Note:** The proxy types are **case insensitive**.

---

**PROXY\_FALLBACK**

**Type** bool(int)

**Default** 0

Fallback value for `match_proxy()`.

---

**Note:** If provided, LINK\_WHITE\_LIST, LINK\_BLACK\_LIST, MIME\_WHITE\_LIST, MIME\_BLACK\_LIST, PROXY\_WHITE\_LIST and PROXY\_BLACK\_LIST should all be JSON encoded strings.

---

## 7.5 Data Submission

### **API\_RETRY**

**Type** int

**Default** 3

Retry times for API submission when failure.

### **API\_NEW\_HOST**

**Type** str

**Default** None

API URL for submit\_new\_host().

### **API\_REQUESTS**

**Type** str

**Default** None

API URL for submit\_requests().

### **API\_SELENIUM**

**Type** str

**Default** None

API URL for submit.selenium().

---

**Note:** If API\_NEW\_HOST, API\_REQUESTS and API\_SELENIUM is None, the corresponding submit function will save the JSON data in the path specified by PATH\_DATA.

---

## 7.6 Tor Proxy Configuration

### **TOR\_PORT**

**Type** int

**Default** 9050

Port for Tor proxy connection.

### **TOR\_CTRL**

**Type** int

**Default** 9051

Port for Tor controller connection.

### **TOR\_STEM**

---

**Type** bool(int)

**Default** 1

If manage the Tor proxy through `stem`.

#### **TOR\_PASS**

**Type** str

**Default** None

Tor controller authentication token.

---

**Note:** If not provided, it will be requested at runtime.

---

#### **TOR\_RETRY**

**Type** int

**Default** 3

Retry times for Tor bootstrap when failure.

#### **TOR\_WAIT**

**Type** float

**Default** 90

Time after which the attempt to start Tor is aborted.

---

**Note:** If not provided, there will be **NO** timeouts.

---

#### **TOR\_CFG**

**Type** Dict[str, Any] (JSON)

**Default** {}

Tor bootstrap configuration for `stem.process.launch_tor_with_config()`.

---

**Note:** If provided, it should be a JSON encoded string.

---

## 7.7 I2P Proxy Configuration

#### **I2P\_PORT**

**Type** int

**Default** 4444

Port for I2P proxy connection.

#### **I2P\_RETRY**

**Type** int

**Default** 3

Retry times for I2P bootstrap when failure.

**I2P\_WAIT**

**Type** float

**Default** 90

Time after which the attempt to start I2P is aborted.

---

**Note:** If not provided, there will be **NO** timeouts.

---

**I2P\_ARGS**

**Type** str (Shell)

**Default** ''

I2P bootstrap arguments for i2prouter start.

If provided, it should be parsed as command line arguments (c.f. `shlex.split`).

---

**Note:** The command will be run as DARC\_USER, if current user (c.f. `getpass.getuser()`) is *root*.

---

## 7.8 ZeroNet Proxy Configuration

**ZERONET\_PORT**

**Type** int

**Default** 4444

Port for ZeroNet proxy connection.

**ZERONET\_RETRY**

**Type** int

**Default** 3

Retry times for ZeroNet bootstrap when failure.

**ZERONET\_WAIT**

**Type** float

**Default** 90

Time after which the attempt to start ZeroNet is aborted.

---

**Note:** If not provided, there will be **NO** timeouts.

---

**ZERONET\_PATH**

**Type** str (path)

**Default** /usr/local/src/zeronet

Path to the ZeroNet project.

**ZERONET\_ARGS****Type** str(Shell)**Default** ''

ZeroNet bootstrap arguments for ZeroNet.sh main.

---

**Note:** If provided, it should be parsed as command line arguments (c.f. `shlex.split`).

---

## 7.9 Freenet Proxy Configuration

**FREENET\_PORT****Type** int**Default** 8888

Port for Freenet proxy connection.

**FREENET\_RETRY****Type** int**Default** 3

Retry times for Freenet bootstrap when failure.

**FREENET\_WAIT****Type** float**Default** 90

Time after which the attempt to start Freenet is aborted.

---

**Note:** If not provided, there will be **NO** timeouts.

---

**FREENET\_PATH****Type** str(path)**Default** /usr/local/src/freenet

Path to the Freenet project.

**FREENET\_ARGS****Type** str(Shell)**Default** ''

Freenet bootstrap arguments for run.sh start.

If provided, it should be parsed as command line arguments (c.f. `shlex.split`).

---

**Note:** The command will be run as DARC\_USER, if current user (c.f. `getpass.getuser()`) is *root*.
